

Your Kubernetes infrastructure. Our expertise.

For more than ten years, KubeOps has been the go-to partner for the secure and confident implementation of Managed Kubernetes. From medium-sized businesses to international corporations and critical public infrastructure, we provide assistance with all Kubernetes-related issues, from setting up brand-new systems to managed services for existing Kubernetes infrastructure.

For many years, the Federal Information Technology Centre (ITZ) has entrusted us with the introduction and operation of the Bund ID. Kubernetes technology ensures reliability, security against cyber attacks and easy scalability for this important system.

Training and certification with the KubeOps Academy

At the KubeOps Academy, you will learn everything you need to know about Kubernetes. As an official training partner of the Linux Foundation for Kubernetes, our courses provide the necessary know-how, from basic knowledge to specialised certifications.

Our bestsellers:

- Kubernetes Administration (LFS458)
- Certified Kubernetes Administrator (CKA)
- Certified Kubernetes Security Specialist (CKS)

Managed services and outstanding support

Leave the operation of your Kubernetes infrastructures to our experts.

KubeOps keeps your systems up to date, ensures compliance and we will work with you to determine which services you need.

We help you with onboarding and certification processes and, on request, provide 24/7 on-call support as well as many other services.

Service highlights:

- High availability setup
- Infrastructure management
- Air-gapped operation for maximum security
- NIS2 compliant
- Regular updates to hardened software images
- Thorough customer onboarding
- Comprehensive tools for monitoring and logging
- Service level agreements tailored to your needs

KubeOps Professional Services: Bespoke consulting services

Whether it's implementation, optimisation or compliance: KubeOps offers specialised consulting services for everything related to Kubernetes, containerisation, virtualisation and digital sovereignty - modular, BSI-compliant and future-proof. From analysing your requirements for new projects to optimising the operation of existing systems, we provide you with competent and professional support.

Efficient and secure software solutions

KubeOps Tools are based on open source technologies. These are tested and hardened by our experts in a detailed process. Our software solutions combine flexibility and openness with the highest security standards and are perfectly suited for BSI-tested environments. Whether you use public cloud (such as AWS or Azure), private cloud or on-premise, our tools are the right choice for you.

KubeOps Compliance for the efficient provisioning, management and scaling of Kubernetes clusters with the highest security and data protection requirements.

KubeOps Software Installer (KOSI) for easily installing verified applications and packages, especially in secure air-gapped environments.

KubeOps VM combines virtualisation and container technology in a flexible, open-source-based solution - without vendor lock-in.

A strategy that adapts to your needs, not the other way round

Kubernetes is a new challenge for you and you would like to learn more?
Or are you already deeply involved in the topic and looking for competent partners to implement ambitious projects?
We can help you at all levels, from analysing existing systems to designing and implementing completely new projects.

Arrange a consultation appointment now and talk to us about your individual needs.
